

Final Project Proposal for Back end software development

Project Participants:

1. KBROM BEZABIH

Title: TOTC Management System

Executive Summary:

This TOTC management system is expected to manage the Tigrayan Orthodox Tewahido Churches (TOTC) found in the United States by adding the churches and their respective employees and members.

The system also has a privilege to retrieve, update, and delete the churches, their employees and members.

Initial Features:

Create a bulleted list of Initial Features. This will be a list of features that meet the requirements of the final project.

- Add church
- Retrieve church by Id
- Retrieve all churches
- Update church details
- Delete church (including its employees and members)
- Add employees
- Add members

Stretch Goals (to be completed if time allows, or after graduation):

- Update employee
- Delete employee
- Update member
- Delete member
- Add church services (services members can get from the church including Baptism, Liturgy, Prayer service)
